

## AssetView Overview

**Web Based Application**

**Server to Server**

**Unit Manager**

**Map Display**

**GeoFence - Polygons**

AssetView is a fully featured web based application providing online provisioning, unit management, web based alert configurations, and reports. AssetView is readily available to any user with internet access and is a single point of access to account and asset information.

Comtech AeroAstro's AssetView servers reside in a secure, reliable and redundant hosting system and are supported by a Tier 1, five-nines hosting facility. With High Availability in mind, AssetView's Back Office infrastructure is configured to be fully redundant with automated failover capabilities. Data generated by transmissions and user interactions are stored in multiple servers to ensure data is delivered to users from any server cluster.

## TotalAccess

## Customization

Comtech AeroAstro provides AssetView customization services. From branding AssetView with your logo and color palette or a complete Private Labeling. Comtech AeroAstro can also develop custom reports and data views as well as unique functionalities. AssetView can be customized to display the information you want, how you want it.

## Integrated Voice Management Service (IVMS)

Comtech AeroAstro offers voice messaging using the Interactive Voice Response (IVR) technology. Access to Unit data and alert notifications are right at your fingertips. Comtech AeroAstro provides both alert services which calls you with alert notifications (VoiceAlert) and a dial in service which allows you to call a toll-free phone number to check on the status of your assets (DialDirect)

### IVMS Features

- Customized phone lists for each unit
- Up to 10 phone numbers in a call list
- Configurable rounds per call list
- Configurable call intervals per phone number

### Actionable Calls

- Cancel or Pass alarm in 1 phone call
- Key Pad or Voice prompts enabled
